

Color Change Slime:

1. Pour 6 oz ($\frac{3}{4}$ cup) of clear glue into the bowl
2. Add 1 TABLESPOON (tbsp) of baking soda
3. Stir until thoroughly mixed. No clumps
4. Add $\frac{1}{2}$ TEASPOON (tsp) of thermochrome powder.
5. Stir until no dry spots. You may need to scrape down sides of bowl.
6. Add 1 TEASPOON of contact solution and stir well
7. Add 2nd TEASPOON of contact solution and stir, slime will begin to clump together and pull away from sides of bowl.
8. Put some contact solution on your hands, then remove slime from bowl. IT WILL BE SUPER STICKY! Knead it like bread dough.
9. The stickiness will fade and become more solid, you can now use this to clean any stray slime on your hands and bowl.
